Dear Sir/Madam

The United Kingdom Space Agency (UKSA) is undertaking a project to research conjunction analysis (CA) methods and protocols.

Deimos is implementing this project, entitled Collision Assessment Processes and Software (CAPROS), which is intended to provide a comprehensive list of CA processes with clear identification of data and methods used in each of them, operational status and map to user feedback when possible.

In this context, Deimos is conducting surveys on Conjunction Analysis and Avoidance (CA) aspects, to allow us to put together the satellite operators' needs, data providers' capabilities, and trends in methodologies and tools with the aim of identifying possible future collaboration opportunities among stakeholders.

We thank you for your time and inputs. Please note that any information shared will be treated with strict confidentiality.

If you have any questions, please do not hesitate to contact me at [emily.mills@ukspaceagency.gov.uk](mailto:emily.mills@ukspaceagency.gov.uk).

Kind regards

A handwritten signature in cursive script that reads "emills".

Emily Mills

Domestic Space Surveillance & Tracking Lead, UK Space Agency
